**The Role:** We are currently recruiting for an Engineer to service and maintain a wide range of commercial refrigeration and air conditioning applications. In addition to the engineering duties our senior engineer will also have a vital role improving the efficiency, productivity, profitability, and growth of the service department

### This role will involve:

- Carrying out planned maintenance, or reactive diagnosis / repairs to Air conditioning/ HVAC Systems safely, and to the highest standard.
  - Provide effective solutions to the faults found.
  - No installation work
  - Attend manufactures training courses.
  - Uses of cloud-based Job Logic processing system.
  - Aim for fix first time on all repairs.
  - Provide the highest standard of service or repairs to build on our already excellent relationship with our customers.
  - Data input into Job Logic
  - Actively promote the company in the best light
  - Call out rota covering 24 Hour call-out currently one week in 10
- The Person:** The ideal candidate will be a team player with great communication skills and have at least 5 years' trade experience in servicing, repairs and maintenance of Air conditioning systems. (Installation experience not essential but would be an advantage) Refrigeration equipment experience is also essential.

### Qualifications:

- Full UK Driving licence
- FGAS certified to CAT1. C&G or CITB
- Qualified to Level 2 NVQ or C&G in air conditioning and refrigeration
- Additional related qualifications desirable but not essential (e.g. NVQ Level 3 or C&G in Air Conditioning)
- Experience with Air Conditioning split systems, VRF systems, Close Control CRAC Systems, Water Chillers and HVAC Systems

**Working Hours:** 40 Hours per week basic – Additional hours may be required. This is a field-based role which requires travel to customer's sites, occasional nights away, weekend and some night work.

**Location:** Mobile position covering travel nationwide
